

AND 7550

Broad Disease Protection
Excellent Persistence, High Yields

AND 7550

- ➔ *Selected for increased persistence to 4 Nematodes*
- ➔ *Resistance and/or High Resistance to 11 Major pests included 5 diseases, 2 insects, and 4 Nematodes*
- ➔ *Dark-Green color with medium-fine stems*
- ➔ *Fall Dormancy: 5.0*
- ➔ *WSI=4.1*

Adaptation

Parent stock for AND 7550 was specially selected to meet the demands of alfalfa growers in the areas where a 5-fall dormancy is suitable. It was selected for yield and persistence and is especially well suited to areas where Verticillium wilt, Phytophthora, and Nematodes threaten yield production and reduce stand life.

Top Yield Performance

AND 7550 has demonstrated excellent yield ability out yielding varieties like Pioneer 53V63, Pioneer 53Q63, Pioneer 54V54, Pioneer 54Q53, Forecast 1001, HybriForce 400, Rebound 4.2, Vernema, Vernal, and WL 319 HQ in Western trials.

Quality

AND 7550 produces dark green foliage that makes it ideal for hay. Its persistence is excellent under both normal and aggressive harvest schedules. Because AND 7550 offers producers broad-spectrum pest resistance and excellent persistence, this high yielding variety will keep producing quality hay for many years.

Broad Spectrum Pest Resistance

AND 7550 resists Phytophthora and Verticillium wilt. These two diseases can significantly reduce production and stand life. In addition, AND 7550 has excellent resistance to Bacterial wilt, Fusarium wilt, Anthracnose, Spotted Alfalfa Aphid, Blue Alfalfa Aphid, Stem Nematode, Northern Root Knot Nematode, and Columbia Root Knot Nematode.
