

Fruit Trees

All fruit trees are semi-dwarf (15-20 ft. tall) unless otherwise noted.

APPLE

CULTIVAR

DESCRIPTION

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

4-N-1 COMBO	Four varieties of apples grafted onto one tree give home gardeners the opportunity to grow several delicious varieties of fruit in a limited space. Specific varieties TBD.
BRAEBURN	Z 5. Medium size. Has orange-red blush over yellow ground. Crisp, sweet/tart flesh. Stores well. Late to ripen.
GRAVENSTEIN	Z 2. Large, vigorous tree. Crisp, juicy, fine-grained, yellowish-white flesh, fine flavor, large, round to slightly flattened. Orange-yellow fruit with red stripes, and thin skin. The very best for cooking and cider. Self fertile, but pollinates best with Red or Yellow Delicious, Fuji, or Gala.
PINK LADY	Z 5. A very crisp apple with a sweet-tart flavor. Has a reddish-pink skin with a green background. The flesh resists browning when cut, and is a good keeper. Likes a hot climate and ripens late season. Require 500 hours chilling.

Varieties that require a pollinator: *Please note— Red Delicious needs a pollinator, but will not pollinate other trees.*

FUJI	Z 6. Vigorous, productive, bushy tree, needs annual detailed pruning. Crisp, juicy, flavorful, slightly sub-acid, white flesh, outstanding texture. Medium size, yellowish green with orange-red flush and stripes. Good keeper. Pollinate with Yellow Delicious
HONEYCRISP	Z 4. Ripens mid-season. Medium-size, red, firm, crisp, with excellent sweet-tart flavor. Very hardy. Resistant to fire blight, somewhat resistant to scab.
MCINTOSH	Z 4. Medium to large, bright red, nearly round fruit. Snowy white, tender flesh. Excellent tart flavor. Very good fresh, or in sauces, pies, or cider. Needs pollinator.
RED DELICIOUS	Z 4. High yielding, fast growing tree. Needs full sun all day for best fruit production. Fine-grained, tender, mild flavor, crisp, juicy flesh. Holds crispness and flavor until May. Large, waxy, dark red fruit. Excellent dessert apple. Great for fresh eating. Pollinate with Yellow Delicious. Needs a pollinator, BUT does not pollinate other apples.
GOLDEN DELICIOUS	Z 5. Apples are medium to large with yellow skin and a pink blush, and have crisp, aromatic flesh. Trees bear at a young age. Fruits hold well on the tree and can be harvested late in the season for fresh eating or cooking.

APRICOT

CULTIVAR	DESCRIPTION
----------	-------------

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

HARCOT	Self-fruitful. From Canada. Frost hardy late bloom. Resists brown rot and perennial canker. Medium to large fruit with sweet, juicy, rich flavor - one of the best.
TILTON	Firm, medium to large fruits with rich flavor recommend this widely adapted tree as one of the best apricots for home orchards and the #1 apricot for canning. Fruit is also excellent when eaten fresh or dried. Self fruitful, it performs best in Zones 5-9 and requires an estimated 600 chilling hours.
WENATCHEE MOORPARK	One of the best apricots in cultivation! Great for fresh-eating, canning, and even drying. High in vitamins and antioxidants. Flowers give way to large, golden-yellow fruits in summer. Introduced in the late 1600s. Freestone. Ripens in mid-July.

CHERRY

CULTIVAR	DESCRIPTION
----------	-------------

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

MONTMORENCY (Tart)	The principal commercial tart cherry grown for processing. Montmorency is bright red on the outside and has a clear yellow flesh. The tree is early bearing, productive and self fruitful. Hardy to -40 F.
STELLA (Sweet)	Large, heart-shaped, dark red fruit. Sweet, juicy flesh. Rich flavor. Ideal for home orchard. Very vigorous, productive tree. Moderate crack resistance. Fine pollinator for other varieties. Ripens in mid-June. First self-fertile sweet cherry. Hardy to -20 F.

Varieties that require a pollinator:

BING (Sweet)	Bing is the leading commercial sweet cherry of the western states. The fruit is dark mahogany in color, firm, and juicy. Exceptionally large fruit of the finest quality is typical of this variety. Large spreading tree. Pollinate with Montmorency, Rainier, or Stella. Hardy to -20 F.
UTAH GIANT (SWEET)	Boasting larger, firmer more flavorful fruits than Bing or Lambert, this dark, sweet cherry is a top choice for canning and eating fresh. The favorite of Utah's commercial orchardists, it is also a top performer for home orchardists in Utah and other high, dry climates. It requires 800 chilling hours and a pollenizer such as Bing , Van, Lambert or Rainier. Zone 5-9.

BUSH CHERRIES

CARMINE JEWEL	Large, gorgeous purplish-red fruit that offer a beautifully-balanced fruit. This fruit is a fantastic choice for pies, juice, preserves, and, of course, eating fresh! By year 5, this fantastic producer will be yielding between 20 and 30 pounds of delicious cherries.
JULIET	These beautiful, dark-red cherries are absolutely the best for eating fresh. These full-sized cherries are easy to pick with pits that are easy to remove. These extremely cold-hardy bushes will continue to produce excellent yields year after year.
ROMEO	Romeo produces a high-gloss, deep-crimson fruit. With a high flesh-to-pit ratio, this delicious fruit is wonder for fresh eating. The bush produces wonderful flowers and dark-green foliage and doubles as a delicious fruit producer and ornamental piece for the yard.

NECTARINE

CULTIVAR	DESCRIPTION
----------	-------------

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

FANTASIA	Large, freestone. Bright yellow and red skin. Firm yellow flesh. Sweet, rich flavor. Midseason. Vigorous tree.
FLAVORTOP	Flavortop is a self-pollinating, heavy-bearing tree that produces delicious freestone nectarines with yellow flesh and red skin.

PEACH

CULTIVAR	DESCRIPTION
----------	-------------

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

ELBERTA	Large, oblong, yellow fruit with a light red blush. Fine grained, yellow, freestone flesh. Sweet, rich flavor. Good for canning, eating, and freezing. Ripens in late July. Vigorous, self-fruitful tree. Hardy to -20 degrees F.
FROST	Medium size, freestone fruit. Yellow skin with slight red blush; yellow flesh. Tangy flavor. Midseason to late. Resistant to peach leaf curl.
PIX ZEE (dwarf!)	Grows 6'x6'! Harvest early to mid-season. Large, delicious, firm, yellow freestone, beautiful red over orange skin.
RED HAVEN	The standard for early peaches. Medium, nearly fuzz-less fruit; bright all-over red. Firm, yellow flesh becomes freestone as it ripens. Great for dessert, canning, and freezing. Tolerates handling well; flesh resists browning. Vigorous, strong-growing, self-fertile tree bears young. Hardy to -20 degrees F. Self fertile.
SNOW BEAUTY WHITE	White-fleshed freestone peach has received the highest score of all peaches tested. In addition to a tantalizing low-acid sweet flavor, Snow Beauty offers large size and full, deep red-over-white skin color.
VETERAN	One of the most reliable peaches for cold climates. Winter hardy and late blooming. Yellow to yellow-orange skin. When fully ripe, the yellow flesh is freestone and richly flavored.

PEAR

CULTIVAR	DESCRIPTION
----------	-------------

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

BARTLETT	A sweet, juicy pear with yellow skin. Good for canning and eating fresh.
RED SENSATION BARTLETT	Firm, medium to large fruits with rich flavor recommend this widely adapted tree as one of the best pear for home orchards and the #1 pear for canning. Fruit is also excellent when eaten fresh or dried. Self fruitful, it performs best in Zones 5-9 and requires an estimated 600 chilling hours.

PEAR, cont.

CULTIVAR	DESCRIPTION
----------	-------------

Varieties that require a pollinator:

BARTLETT	Is self fertile, but performs better with a pollinator. A sweet, juicy pear with yellow skin. Good for canning and eating fresh.
----------	--

PLUM

CULTIVAR	DESCRIPTION
----------	-------------

Self Fertile Varieties: *While many fruit trees are self-fertile, you will have higher fruit yields when pollinated by another variety.*

ITALIAN PRUNE	Large, purple-skin, freestone. Rich flavor, very sweet when fully ripe. Fresh/dried/canned. Vigorous, cold hardy tree. Late bloom. Late summer harvest.
---------------	---

Varieties that require a pollinator:

ELEPHANT HEART	Home orchard favorite: large, heart-shaped fruit with sweet, juicy, richly flavored, firm red flesh. Dark reddish-purple mottled skin. Long harvest season - September in Central CA. Hardy, heavy bearing tree. Pollinate with Santa Rosa or Beauty.
----------------	---

EMERALD BEAUTY	One of the highest-rated plums in blind fruit tastings at DWN. Light green skin, greenish-yellow to orange freestone flesh. Harvest begins late August. Ripe fruit continues to sweeten, becoming exceptionally sweet, but remaining crisp and crunchy. Ripe fruit holds on tree longer than any other stone fruit two months or more! Pollinate with Beauty, Burgundy, Late Santa Rosa, Nubiana, Flavor King Pluot.
----------------	--

SANTA ROSA	* Partially self-fertile. Very large, round to oval, purplish-red fruit covered with light dots. Fragrant, fine textured, clingstone flesh, purplish near the skin, yellow streaked pink near the pit. Keeps and ships well. Ripens midseason. Hardy to -20 degrees. Japanese Plum.
------------	---

SATSUMA	*Partially self-fertile. Medium to large dark red fruit with small pit. Firm ,meaty, juicy flesh with a sweet, lively flavor. Excellent for fresh eating, cooking or preserves. Ripens mid to late season. Partially self-fertile but improved when pollinated with Shiro or Santa Rosa.
---------	--

SPECIALTY

CULTIVAR DESCRIPTION

Varieties that require a pollinator:

COT-N-CANDY APRIUM	An aprium is a cross between an Apricot and Plum. The skin of the fruit has less fuzz and its blushed-red flesh presents an apricot flavor up front followed by a pleasant, lingering plum. This is an early-ripening fruit that is winter hardy and tolerant of wet soil. Needs well-drained soil.
PLUERRY 'SWEET TREAT'	Sweet Treat is the first of its kind, the Pluerry™: a new fruit type from the genius of Floyd Zaiger. This taste-test favorite is a complex interspecific hybrid, predominantly of plum and cherry, combining the sweetness of a cherry with that summer fresh plum zing. Much larger than a cherry, this precocious and prolific variety will hang on the tree for over a month, and the colorful fruit make Sweet Treat a true ornamental.
PLUOT 'DAPPLE DANDY'	Sold in stores as "Dinosaur Egg®," the large, firm Dapple Dandy Pluot® interspecific plum has a distinctive skin color that is pale green to yellow with red mottling. By traditional standards, the skin is unattractive, a fact that will be quickly forgotten after one taste of the creamy pink flesh. Dapple Dandy offers a spicy, plum-apricot flavor and a good acid to sugar balance (17 °Brix). The spreading tree is very productive. Requires pollinator such as Flavor Queen Pluot®, Flavor Supreme Pluot®, Santa Rosa plum or Burgundy plum.
PLUOT 'FLAVOR KING'	Taste test winner. Unique plum-apricot hybrid with sensational bouquet and sweet, spicy flavor. Reddish-purple skin, crimson flesh. Naturally small tree. Pollenized by Flavor Supreme Pluot® or Dapple Dandy Pluot®, Santa Rosa plum or Late Santa Rosa plum.
