

# GOLDEN JUBILEE

## Sweet Corn

Golden Jubilee is one of the latest maturing varieties we sell and is excellent for late summer enjoyment. While an excellent variety for eating fresh, it is also a good choice for freezing and canning.

## NOTES

### VARIETY INFO

**Botanical Name:** *Zea mays* "Golden Jubilee"

**Plant Dimensions:** 72-84 inches

**Days to Maturity:** 100

**Zone:** 2-10

### SOWING INFO

**Sow Outside:** Sow 3/4-1" deep, 6-7" apart, rows 30-36" apart. Arrange in blocks of at least 4 rows for proper pollination, which is needed for well-filled ears.

Successive plantings can be made through early summer; most growers prefer to extend the sweet corn season by planting a few varieties of different maturities. Once corn reaches to be 4 inches tall, thin out to 8-12 inches apart.

**Start Inside:** Not recommended.

**Days to Emerge:** 5-10 days.

**Seed Depth:** 1"

**Seed Spacing:** 6-8"

**Row Spacing:** 24-30"

**Thinning:** Not required.

### GROWING INFO

**Harvesting:** When kernels are full and "milky," generally indicated by a drying and browning of the ear silks.

Record the date on which about half the plants show silk. Corn is ready to eat 18-24 days after ear silks first show; the warmer the weather, the sooner you can pick it.

**Fruit:** Ears grow to 9" in length with 20 rows of bright yellow kernels.
