

GRANDE RIO VERDE

Tomatillo

This tomatillo variety is a heavy producer of large, 3-4 oz apple-green fruit. The medium-sized plant is determinate and won't require staking. Excellent flavor. Tomatillos have a firmer texture than tomatoes and are colder hardy. Tomatillos are an excellent source of iron, magnesium, potassium, Vitamin C and K, fiber, niacin, and manganese.

NOTES

VARIETY INFO

Botanical Name: *Lycopersicon esculentum*

Plant Dimensions: 3-4'

Days to Maturity: 85

Zone: 3-10

SOWING INFO

Sow Outside: 2 to 4 weeks after your average last frost date, and when soil temperature is at least 60°F.

Start Inside: If starting indoors, plant 4-6 weeks before the last killing frost. Transplanting is best done 1 to 2 weeks after the average date of the last frost for your region.

Days to Emerge: 7-14 days

Seed Depth: 1/4-1/2"

Seed Spacing: 18"

Row Spacing: 24"

Thinning: Not necessary

GROWING INFO

Harvesting: Grande Rio Verde will be ready for harvesting in roughly 85 days. The fruits will develop a papery husk, and the fruits will willingly drop to the ground when they are ready to be consumed. Grande Rio Verde fruits can be stored in the fridge, in Ziplock bags for a good two weeks, and can also be frozen as well.

Fruit: 3-4 oz apple-green fruit.
