

SUGAR ANN (BUSH PEA)

Snap Peas

A much-loved variety that always comes through in the early season with uniform crops of absolutely delicious, 2–2 1/2" long peas. This snap pea variety has an edible pod that offers earliness, productivity, and a compact growth habit.

NOTES

VARIETY INFO

Botanical Name: *Pisum sativum* 'Sugar Ann'

Plant Dimensions: 24"

Days to Maturity: 50-60

Zone: 3-9

SOWING INFO

Sow Outside: Plant the first sowing in early spring as soon as the soil can be worked. Sow 2" apart, 1" deep, with rows 12"-18" apart. If pea is a vining variety its best to have a support or trellis system to help with diseases and yield.

For fall crops sow 6-8 weeks before first frost date.

Inoculate peas to encourage formation of nitrogen producing nodules on the plant roots. This enriches the soil, results in larger plants, and increases yield.

Start Inside: Not Recommended.

Days to Emerge: 7 - 10 Days

Seed Depth: 1-1.5"

Seed Spacing: 2 - 3"

Row Spacing: 18-24"

Thinning: Not required.

GROWING INFO

Harvesting: Harvest frequently to increase yields. Do not let peas over-mature as this will slow production.

Fruit: 2–2 1/2" long peas
