

# TALL UTAH

## Celery

Utah 52-70 is a tall, medium dark green celery with long, thick stalks that are sweet and crunchy. Overall plant height can be up to 30", with the first joint appearing 10-11" up on the plants. This variety develops strong roots with good heart development.

## NOTES

### VARIETY INFO

**Botanical Name:** *Apium graveolens* 'Tall Utah'

**Plant Dimensions:** 30"

**Days to Maturity:** 100

**Zone:** 2-7

### SOWING INFO

**Sow Outside:** Don't plant celery outside until the daytime temperature stays above 50° F. Celery doesn't like heat or intense sun and in hot climates will do better in light shade. It does need at least 6 hours of sun daily though.

**Start Inside:** In cool climates, sow indoors, then moisten and cover with clear plastic. When celery leaves begin to emerge, remove the plastic cover and place the container in a sunny spot, always keeping soil moist. When there are two true leaves, transplant outside when soil has warmed and night temperatures have been above 40°

**Days to Emerge:** 7 – 12 days

**Seed Depth:** 1/8"

**Seed Spacing:** 6" - 12"

**Row Spacing:** 18" - 36"

**Thinning:** Thin to 8" apart.

### GROWING INFO

**Harvesting:** Cut stalks as needed from the outside of the plant using a sharp knife. You can also wait to harvest the whole plant by cutting at soil level when all stems have reached full size, about 2 to 2.5' tall. Storage: Stalks will keep in the refrigerator for 1–2 weeks.

**Fruit:** Utah 52-70 is a tall, medium dark green celery with long, thick stalks that are sweet and crunchy.
