

# WHITE HULLESS POPCORN

Corn

White Hulless Heirloom Popcorn is an older variety grown with heirloom non-hybrid GMO free seed. It is a smaller kernel corn known for its distinctive nutty flavor and crunchy texture. The thin hull is very palatable and often pops off the kernel.

## NOTES

## VARIETY INFO

**Botanical Name:** *Zea mays* 'White Hulless Popcorn'

**Plant Dimensions:** 8-12"

**Days to Maturity:** 83

**Zone:** 3-12

## SOWING INFO

**Sow Outside:** Plant 'Ambrosia' sweet corn seeds about two weeks after the last spring frost date when the soil has warmed to at least 50 degrees Fahrenheit. Sweet corn planting depth is about 1 1/2 to 2 inches deep into moist, heavy soils. In dry, sandy soils, sow seeds 2 to 2-1/2 inches deep.

**Start Inside:** Not Recommended.

**Days to Emerge:** 7-12 days

**Seed Depth:** 1.5 - 2"

**Seed Spacing:** 3"

**Row Spacing:** 24-36"

**Thinning:** Not necessary

## GROWING INFO

**Harvesting:** Leaving the corn on its stalks to completely dry in the field gives the best results; when they are ready to harvest, the stalk and the ears will be completely brown with no green coloring at all. However, since continued rainy weather and humidity compromise the quality of the ears, it may be necessary to continue drying them inside. Choose a dry location with moderate heat, but out of direct sunlight; hang the stalks upside down, or lay them out flat.
